PREVENTIVE HEALTH SCREENING

ANNUAL PARTICIPATION

The chart displays a clear alternating pattern over time, but bowel cancer screening takes the lead in the final year.

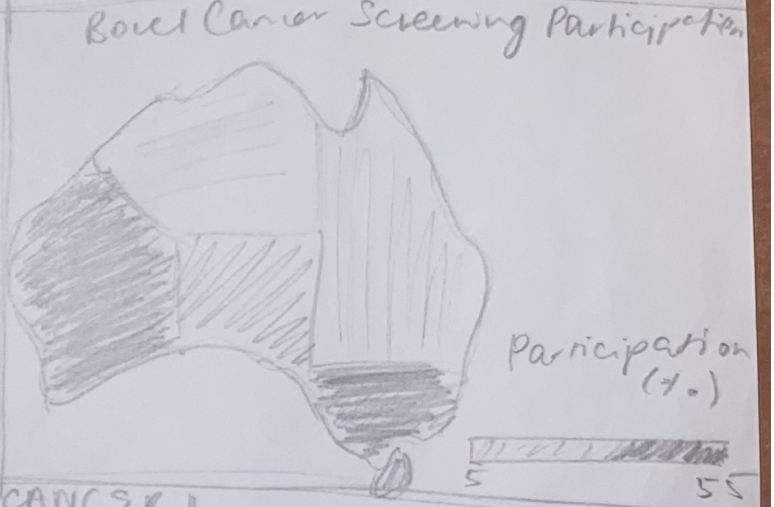

BOWEL CANCER SCREENING

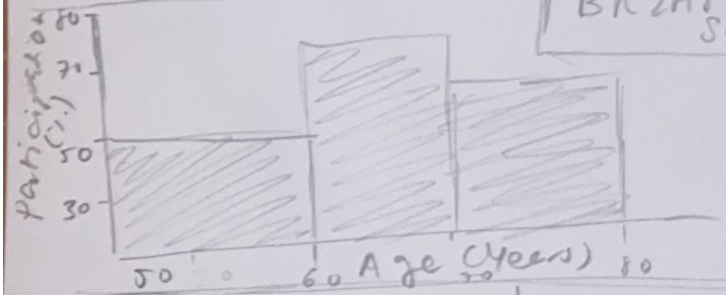

The connected dot plot shows that participation in screening activity varies by sex and age group, with men overtaking female participation between 40 to 50, but not 30 to 40.

The choropleth Map shows that Victoria and WA have the highest Bowel Cancer screening participation rates

BREAST CANCER SCREENING

Examining the chart we notice that the 60-70 age group has a participation rate of roughly 75%, marking the highest in the group.

DIAGNOSTIC OUTCOMES

The chart show the flow of screening to outcomes. It appears Bowel cancer has the largest percentage of negative outcomes, with the Breast cancer closely following in 2nd place.
